

# SPRING 2 2025

We have been exploring coordinates in our maths lessons. We translated shapes from one point to another using directional language.

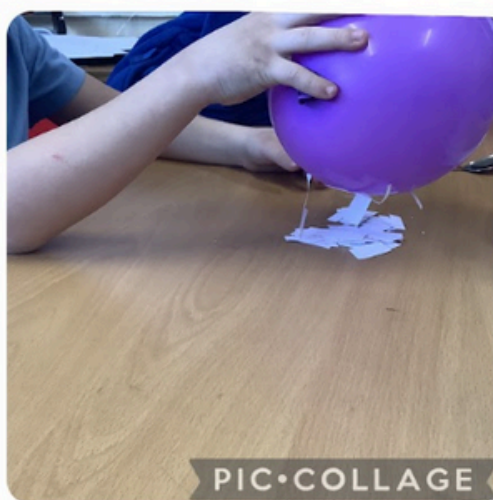

During our writing lessons, we explored the text 'Tin Forest'. We were surprised to see all this rubbish and waste had been dumped in our classroom. We used this experience to help us write a setting description.

This half term, we have been lucky enough to work with our partners at Hull KR. We explored the robots and experimented with the speed they could travel. We even had a robot race!

In geography, we have been learning about Settlements and why people choose to settle where they do. We looked at and used the 8 points on a compass. We learnt a rhyme to help us remember them!

In science, we looked at scientific discoveries linked to electricity and how these have implications on our lives today. We had great fun performing tests whilst investigating positive and negative charges.

## YEAR 4 KINGFISHERS
