

SUMMER 2 2025

This term, we explored poetry by writing cinquains inspired by images from our text. We also wrote informative reports about varmint and the problems they cause, and had fun creating character descriptions of heroes and villains to entertain our readers.

This term, pupils built on their coding skills by learning how to use 'If... Then... Else' statements to create different outcomes in their programs. They used this knowledge in Scratch to design and build their own interactive quizzes.

During our Eco trip, we explored the natural world and learned all about flowers, the importance of habitats and insects, and how food chains work. We also had fun investigating different habitat surroundings and discovering how each one supports wildlife in its own unique way.

This term in Science, we explored how different plants reproduce in fascinating ways. One of the highlights was investigating how spring onions can regrow their roots all by themselves – a fun and surprising discovery!

Challenge Cup Visit!

We were thrilled to welcome Hull KR to school and get a special chance to see the famous Challenge Cup up close! The children really enjoyed learning about the trophy's rich history and why it's so important in rugby.

YEAR 5 BADGERS
